

Green Up Your Natural Gas!

This Earth Day, choose a simple way to do more for the environment by adding WGES Carbon Offsets Plus to your WGES Natural Gas Plan.

Natural gas is one of the cleanest energy sources available, but its use still results in some greenhouse gas emissions. With WGES Carbon Offsets Plus, you can counterbalance the environmental impact of 100% of your natural gas use and support cleaner air and water in our region. A carbon offset represents a greenhouse gas emission reduction made in one place to compensate for emissions created in another place. WGES Carbon Offsets Plus are different from other carbon offsets — each offset supports independently verified emissions-reduction projects in our region and also initiates new projects, such as tree plantings along rivers and streams.

When You Add WGES Carbon Offsets Plus to Your WGES Natural Gas Plan:

- Your natural gas usage will be matched with independently verified carbon offsets from regional projects, giving you an easy way to support cleaner air and water.
- WGES Carbon Offsets Plus will be added to your current contracted natural gas supply price at an additional 15¢ per therm. That's less than \$1 a day for the average household. For your convenience, the addition will be included on your current natural gas bill from your utility.

Support Cleaner Air and Water — Upgrade to WGES Carbon Offsets Plus Today.

WGES' price is for natural gas supply charges with WGES Carbon Offsets Plus and does not include balancing, taxes, utility distribution charge or other utility fees or charges. Additional offset purchases will be billed at 15¢ per therm for the duration of your existing contract. WGES' price is not regulated by the Public Service Commission of the District of Columbia or the Maryland Public Service Commission. The customer is not required to buy energy or other products and services from WGES in order to receive the same quality service from Washington Gas.
